

THE FIRE ANNIHILATOR.

Our friends of the Scientific American are disposed to make themselves merry at the expense of the Napoleon of speculators. They say "if ever we had a doubt respecting the efficacy of the annihilator, that doubt was confirmed by Dr. C."—his sham experiments and miserable logic. It was given out that a model house would be set on fire and extinguished; well this was all a plain falsehood, for a small house of the size of a dog-kennel was on the table, but it was not set on fire, for it was made of sheet-iron. A few dry sticks and shavings were set on fire, but they were so arranged, as we could easily see, that they would go out themselves in a very short time.

Now this is severe, very. But is it just? We are disposed to think that the great difficulty lies in the desire to claim too much for the apparatus; and that while it may be unimportant in all cases where a conflagration has attained headway, it is powerful as a prevention when timely introduced. The "Transcript," noticing the experiments made in Boston, gives, we suspect, about the whole substance of this immense kernel in the following small nutshell: "The annihilator was mainly useful, not in extinguishing large fires, but in preventing large fires, by extinguishing the flames before they had extended beyond one or two rooms, where fires are usually discovered. All fires have their infancy, and at one stage could easily be extinguished with a single quart of water. At another stage they require whole buckets of water. At another the room is so filled with smoke that it cannot be entered. At this last stage the annihilator can be used to great advantage."—American Courier.

We cut the following advertisement from a paper published in the far west; it is a specimen of a mode of life with which we are but little acquainted in the eastern country:—
"To rent, a house on Mellow Avenue, located immediately alongside of a fine plum garden, from which an abundant supply of the most delicious fruit may be stolen during the whole season. Rent low—and the greater part taken in plums."
